

1. Create 'spj' database'.
2. Create following tables in spj database.

CREAT TABLE S

(S# CHAR(5) NOT NULL, Sname CHAR(20), status SMALLINT, city CHAR(15));

TABLE S

S# Sname status city

=====

S1 Smith 20 London

S2 Jones 10 Paris

S3 Blake 30 Paris

S4 Clark 20 London

S5 Adams 30 Athens

```
1  -- create database spj
2  -- create table `spj`.`s` (
3  -- `#S` char(5) not null,
4  -- `Sname` char(20) null,
5  -- `status` smallint null,
6  -- `city` char(45) null );
7 • use spj;
8 • insert into s values ('S1', 'Smith', '20', 'London');
9 • insert into s values ('S2', 'Jones', '10', 'Paris');
10 • insert into s values ('S3', 'Blake', '30', 'Paris');
11 • insert into s values ('S4', 'Clark', '20', 'London');
12 • insert into s values ('S5', 'Adams', '30', 'Athens');
13 • select * from s;
```

|             |    |       |        |        |              |         |                    |
|-------------|----|-------|--------|--------|--------------|---------|--------------------|
| Result Grid |    |       |        |        | Filter Rows: | Export: | Wrap Cell Content: |
|             | #S | Sname | status | city   |              |         |                    |
| ►           | S1 | Smith | 20     | London |              |         |                    |

1. Write a query that produces all rows from the Customers table for which the salesperson's number is 1001.
2. Write a select command that produces the rating followed by the name of each customer in San Jose.
3. Write a query that will produce the snum values of all salespeople from the Orders table (with the duplicate values suppressed).
4. Write a query that will give you all orders for more than Rs. 1,000.
5. Write a query that will give you the names and cities of all salespeople in London with a commission above 0.10.
6. Write a query on the Customers table whose output will exclude all customers with a rating <= 100, unless they are located in Rome.
7. What will be the output from the following query?  
 Select \* from Orders  
 where (amt < 1000 OR  
 NOT (odate = '1990-10-03'  
 AND cnum > 2003));

8. What will be the output of the following query?

Select \* from Orders

where NOT ((odate = '1990-10-03' OR snum >1006) AND amt >= 1500);

9. What is a simpler way to write this query?

Select snum, sname, city, comm from Salespeople

Where (comm >= .12 or comm <= .14);

10. Write a query that selects all of the customers serviced by Peel or Motika.

(Hint:the snum field relates the two tables to one another).

11. Write a query that selects all orders except those with zeroes or NULLs in the amt field.
